

Real time video traffic for multi-terminal

With TRAFFIC 100 you can deliver real time video traffic files to website, corporate tv, digital outdoors, mobile, and much more. An easy to use interface will allow any member of your organization to select the traffic camera you want, and define where to deliver the real time video file. One simple solution to integrate with your traffic cam supplier. You can access to analog or digital traffic cameras, and deliver the content to your customer or partner with a low bandwidth requirement. Only with TRAFFIC 100 you are able to get the best business model to your customers, since you don 't need high bandwidth to deliver real time video traffic files.

The Solution

TRAFFIC 100 is based on a single tower server, with one video input to capture all your digital or analog video cameras, hot plug hard drive and redundant power supply. As an add-on you can also purchase an extra video input card, and a redundant controller to have your service fully backed-up in case of any incident.

TRAFFIC Management Suite includes the following features:

- . Video file type according to your final terminal, such as mobile, corporate tv, etc (3GP,AVI, FLV,MPEG4)
- . Video duration in seconds
- . Video camera frequencies (analog or digital)
- . Deliver video files (NFS, FTP, HTTP)
